Geons, Black Holes, and Quantum Foam: A Life in Physics ...

Yes, Wheeler has done research on General Relativity, coining the terms "black hole" and "wormhole". The geons of the title are electromagnetic waves so massive they are held together by their own gravity; by Wheeler's calculations, a torus the size of the Sun and a million times more massive is the smallest one for which quantum effects could be ignored; he also explored geons composed

As the nontrivial spatal topology in a geon black hole is present since arbitrarily early times, one does not expect an astrophysical star collapse to result into a geon black hole. Instead, the interest of geon black holes is in their quantum mechanical properties.

Geon black holes and quantum field theory - ResearchGate

Black hole spacetimes that are topological geons in the sense of Sorkin can be constructed by taking a quotient of a stationary black hole that has a bifurcate Killing horizon. We discuss the geometric properties of these geon black holes and the Hawking-Unruh effect on them. We in particular show how correlations in the Hawking-Unruh effect reveal to an exterior observer features of the ...
