Channels are essentially task queues: messages get pushed onto the channel by producers, and then given to one of the consumers listening on that channel.. Django channels work across a network and allow producers and consumers to run transparently across many dynos and/or machines. This network layer is called the channel layer. Channels is designed to use Redis as its preferred channel layer

### Get Started with Django Channels - Slides

import os import channels.asgi os.environ.setdefault("DJANGO\_SETTINGS\_MODULE", "chat.settings") channel\_layer = channels.asgi.get\_channel\_layer() (in the future, Django will probably auto-generate this file, like it currently does for wsgi.py.) At this point, if we got everything right, we should be able to run the app under channels.
