## Input File Tire Rolling Simulation

### CHAPTER 6

#### ROLLING RESISTANCE SIMULATION OF TIRES USING STATIC FINITE ELEMENT ANALYSIS

Tire rolling resistance is a key performance index in the tire industry that addresses the tire quality parameters as well as environmental concern.

$\delta$  is  $\delta$  that is classified by the tire's angular velocity  $\Omega$  and its effective rolling radius  $N$  [3]:  $V_r = \Omega r_e$  (1.1)

To quantify the difference of  $\delta$  and  $\delta$ , longitudinal slip is defined as [ 3 ]:

### **MATLAB & Simulink**

Description. The Tire (Simple) block

represents a simple, no-slip model of a tire that you parameterize by tire radius.. You can optionally add inertia, stiffness, or damping.

These dynamics require additional computation that tends to make models less suitable for real-time simulation.
