Eng-Tips **Engineering Forums**

Reinforced concrete is one of the most widely used modern building materials. Concrete is an “artificial stone” obtained by mixing cement, sand, and aggregates with water. Fresh concrete can be moulded into almost any shape, giving it an inherent advantage over other materials. Steel reinforcement is

The engineer can use engineering schedules or place tags in 2D or 3D views that reference concrete elements and reinforcement patterns. Secondly, rebar can be determined more directly by structural analysis results, while respecting local design codes, a method usually embraced by European countries.
